[5] Returns-Based Characteristics are shown for Class I shares only based on 10-yr returns. For definitions, see Glossary of Terms.
Total investment return at net asset value has been calculated assuming a purchase at net asset value at the beginning of the period and a sale at net asset value at the end of the period; and assumes reinvestment of dividends, capital gain distribution and return of capital distributions / allocations, if any, in accordance with the provisions of the dividend reinvestment plan. Net asset value equals total Fund assets net of Fund expenses such as operating costs and management fees. Total investment return at net asset value is not annualized for periods less than one year. Performance does not account for taxes. Returns for other share classes vary due to different charges and expenses.

**Investment Risks:** All investing involves risks of fluctuating prices and the uncertainties of rates of return and yield inherent in investing. The Fund may use **Derivatives**, such as options and futures, which can be illiquid, may disproportionately increase losses and have a potentially large impact on Fund performance. **Mid Cap Stocks** generally have higher risk characteristics than large cap stocks. Other risks of the Fund include but are not limited to: **Investment Model:** A manager's proprietary model may not adequately allow for existing or unforeseen market factors or the interplay between such factors. Mistakes in the construction and implementation of the investment models may create errors or limitations that might go undetected.~ There is no guarantee that the use of these investment models will result in effective investment decisions. **Other Investment Companies Risks; Price Volatility Risks; Securities Lending Risks; and Portfolio Turnover Risks. Investors should consult the Fund's Prospectus and Statement of Additional Information for a more detailed discussion of the Fund's risks.**

The strategy employs a quantitative model to execute the strategy. Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect performance. Furthermore, there can be no assurance that the quantitative models used in managing the strategy will perform as anticipated or enable the strategy to achieve its objective.

**Glossary of Terms: Alpha** measures the difference between a fund's actual return and its level of risk as measured by beta. **Beta** measures the Fund's volatility relative to the overall market. **EPS Growth (3-5 Year Estimate)** is the portion of a company's profit allocated to each outstanding share of common stock. **Information Ratio** measures the returns above the returns of a benchmark to the volatility of those returns. **Price to Book (trailing 12 months)** calculates the ratio of a stock's price to its book value. **Price to Cash Flow** is the ratio of a stock's price to its cash flow per share. **Price to Earnings (next 12 months)** calculates the price of a stock divided by its earnings per share. **ROA** is an indicator of how profitable a company is relative to its total assets. **R-Squared** is the way in which a percentage of a portfolio's total returns represents the portfolio's beta measure. **Sharpe Ratio** is a risk-adjusted measure calculated using standard deviation and excess return to determine reward per unit of risk. **Standard Deviation** is a measure of the degree to which an individual probability value varies from the distribution mean. **Tracking Error** measures the difference between the return fluctuations of a portfolio and the benchmark. **Weighted Average Market Capitalization** is the value of a corporation as determined by the market price of its issued and outstanding common stock.

The **Fi360 Fiduciary Score®** is a peer percentile ranking of an investment against a set of quantitative due diligence criteria indicative of prudent fiduciary management. Each investment is evaluated against nine individual factors and thresholds, with points allotted if it fails a particular criterion. Investments with 0 points are automatically given an Fi360 Fiduciary Score® of 0. Every other investment is given a Score of 1-100 representing their percentile ranking. The lower the Score, the better. The Fi360 Fiduciary Score® should not be used as the sole source of information in an investment decision. Visit Fi360.com/Fi360-Fiduciary-Score for the complete methodology.
