

Unconstrained, multi-sector focus on global risk-adjusted opportunities

Strategy overview

An unconstrained, multi-sector fixed income strategy focused on maximizing total return by seeking risk-adjusted opportunities across the globe.

Key takeaways

- The labor market continued its path of normalization in the third quarter of 2024, with the number of job openings continuing to decline along with the quit rate reverting to pre-pandemic levels.
- Duration and yield curve positioning detracted from returns, while sector allocation added and security selection did not meaningfully contribute.
- As we look ahead to the fourth quarter of 2024, we expect the theme of “normalization” to continue shaping the economic landscape.

Portfolio review

For the quarter ending September 30, 2024, the Voya Strategic Income SMA underperformed the custom benchmark on a gross- and net-of-fees basis. Duration and yield curve positioning detracted from returns, while sector allocation added and security selection did not meaningfully contribute.

The labor market continued its path of normalization in the third quarter of 2024, with the number of job openings continuing to decline along with the quit rate reverting to pre-pandemic levels. This cooling was further evidenced by the Non-Farm Payroll (NFP) report, which missed expectations for both July and August. The substantial miss for July, reported in August, coincided with a controversial rate hike by the Bank of Japan (BoJ), unsettling markets and leading to a sharp widening of credit spreads. However, as investors digested the data, spreads eventually retraced, reflecting a more measured perspective on the total economy.

This moderation in the labor market did not significantly hinder consumer spending, which continued to advance at a decent rate. With elevated home prices and strong equity performance, the wealth effect remained in play however the moderation in the labor market may have been responsible for more measured spending growth, relative to more recent quarters. More broadly, the economy continued to advance at a reasonable pace, as evidenced by 2Q24 gross domestic product (GDP) growth, which exceeded expectations at 2.80% and was later revised to 3.00%.

Inflation continued its downward trend, with core Consumer Price Index (CPI) approaching 3.00% year over year, despite the shelter component remaining stubbornly elevated. Core goods prices remained in deflation, while core services inflation decelerated significantly, partially attributable to moderating wage gains. The U.S. Federal Reserve’s preferred measure, Core Personal Consumption Expenditure (PCE), displayed an even more favorable environment, reading at 2.70% YoY in August. This disinflationary environment provided the Fed with the flexibility to shift its focus from inflation concerns to labor market conditions.

A pivotal moment came in late August with Jerome Powell's speech at Jackson Hole, signaling a shift towards an easing cycle. The Fed, acknowledging the softening labor market, opted for a 50 basis points (bp) cut at their September meeting, larger than the previously anticipated 25 bp reduction. Powell's influence was evident, with only one Federal Open Market Committee member dissenting. This decision underscored the Fed's proactive approach to preserving a healthy labor market and broader economic stability.

Credit spreads began the quarter at tight levels, reflecting a macro environment that balanced disinflation with stable growth. Despite the early August volatility, driven by labor market data and the BoJ's actions, spreads finished the quarter at similarly tight levels as the disinflationary trend allowed the Fed to begin an easing cycle.

Yields rallied in response to continued disinflation, with front-end rates falling more significantly than long-end rates. This bull steepening of the yield curve was driven by expectations of the Fed's easing, which prompted front-end rates to aggressively rally, while a stable growth outlook translated to a more measured decline in the long end.

In conclusion, the third quarter of 2024 was characterized by a gradual moderation in the labor market, further easing of inflation and a proactive shift in monetary policy by the Fed. These factors positively influenced market dynamics, resulting in a period of strong returns for fixed income investors. For the quarter, the Bloomberg Aggregate Index returned 5.20%.

Duration and yield curve positioning detracted from returns, while sector allocation added and security selection did not meaningfully contribute. Asset allocation to investment grade (IG) corporates was the largest contributor, followed by allocations to hard currency emerging markets (EM). Allocations in high yield (HY) corporates detracted; commercial mortgage-backed securities (CMBS) also detracted but more modestly. We maintained overweights to CMBS, asset-backed securities (ABS), non-agency residential mortgage-backed securities (RMBS) and EM hard currency sovereigns, while staying underweight in IG and HY.

Current strategy and outlook

As we look ahead to the fourth quarter of 2024, we expect the theme of "normalization" to continue shaping the economic landscape. We anticipate growth will stabilize close to trend levels, remaining positive but likely decelerating from the robust pace

seen in recent quarters. This dynamic will be driven largely by consumer spending, which, while expected to slow, will continue to be supported by a relatively strong (albeit moderating) labor market and a favorable wealth effect stemming from elevated asset prices.

We project inflation will continue its decline, but at a slow pace and ultimately settling above the Fed's target. Goods inflation is expected to remain at 0% or lower, as consumption growth moderates from historically high levels. Services inflation is likely to continue decelerating as the labor market continues to rebalance and wage growth eases further. Additionally, we anticipate that the shelter component of inflation will eventually align more closely with real-time indicators from sources like Zillow, Apartment List and Yardi, further contributing to the easing of inflationary pressures.

While all this points to a soft landing, markets appear to have priced in this scenario with a high degree of certainty. IG corporate spreads are currently below 100 bp, while HY spreads hover around 300 bp. These levels suggest that markets are highly optimistic that disinflation can continue without a recession materializing. While we tend to agree this is a likely outcome, there remains a risk of more rapid deterioration in the labor market, particularly if corporate margins face further pressures.

Given these tight valuations, we favor assets with higher credit quality or shorter spread durations, as we believe spreads are too tight relative to the underlying risks. However, we remain confident in the fundamental factors that support the economy and are prepared to add risk where appropriate, especially in the face of market volatility stemming from data releases, Fed actions, elections and geopolitical developments.

On the interest rate front, following the substantial rally in 3Q24—particularly at the front end of the curve—the market is now pointing to the Fed reaching its terminal rate roughly one year ahead of the most recent dot plot projections. We believe this reflects a skew of potential outcomes related to monetary policy. Specifically, we believe that the likelihood of reacceleration of inflation that prompts the Fed to reverse course is significantly lower than the probability of a faster cutting cycle if the labor market deteriorates more rapidly.

In summary, as we enter the final quarter of 2024, our economic outlook is characterized by a continued normalization process, with stable growth supported by consumer spending and a moderating labor market backdrop. While we maintain a cautious optimism, we remain vigilant, ready to adjust our positioning in response to an evolving landscape.

Past performance does not guarantee future results.

All investing involves risks of fluctuating prices and the uncertainties of rates of return and yield inherent in investing. High-yield securities, or “junk bonds,” are rated lower than investment-grade bonds because there is a greater possibility that the issuer may be unable to make interest and principal payments on those securities. To the extent that the Fund invests in mortgage-related securities, its exposure to prepayment and extension risks may be greater than investments in other fixed-income securities. The strategy may use derivatives, such as options and futures, which can be illiquid, may disproportionately increase losses and have a potentially large impact on strategy performance. Foreign investing poses special risks including currency fluctuation, economic and political risks not found in investments that are solely domestic. Risks of foreign investing are generally intensified in emerging markets. As interest rates rise, bond prices fall, reducing the value of the strategy portfolio. Debt securities with longer durations tend to be more sensitive to interest rate changes. Other risks of the strategy include but are not limited to bank instruments, company, credit, credit default swaps, currency, floating rate loans, interest in loans, interest rate, investment models, liquidity, market, market capitalization, municipal securities, other investment companies, prepayment and extension, price volatility, US government securities and obligations, portfolio turnover, inability to sell securities risks and securities lending risks.

The strategy employs a quantitative investment process. The process is based on a collection of proprietary computer programs, or models, that calculate expected return rankings based on variables such as earnings growth prospects, valuation, and relative strength.

Data imprecision, software or other technology malfunctions, programming inaccuracies and similar circumstances may impair the performance of these systems, which may negatively affect performance. There can be no assurance that the quantitative models used in managing the strategy will perform as anticipated or enable the strategy to achieve its objective.
